Hi guys , WRITE EVERY SMALL DETAIL U WANT IN YOUR ZONE FOR EXAMPLE (U EVEN SHOULD WRITE THE GLUE ALL THE SMALL INGREDIENTS ALSO NEEDED

Zone-3
phases of this zone:-
Phase 1)
How is information transferred

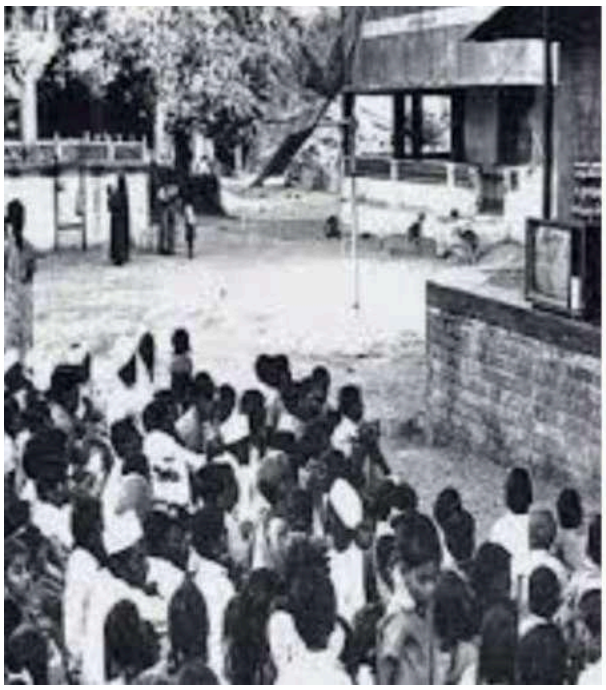
Radio Club of Bombay (Mumbai)

It was in June 1923, that the very first radio program in India was broadcast by the Radio Club of Bombay (Mumbai) and then in November, 1923 from Calcutta (Kolkata). These radio broadcasts were made with the efforts of amateurs, later followed by private enterprise.

1923 — Radio Club of Bombay

Radio broadcasting began in Bombay through the Radio Club of Bombay. It introduced a new way of sharing information using electromagnetic waves instead of physically delivering messages. People with radio receivers could listen to news, music and announcements from a distance.

Why it matters: **Information could now reach many people simultaneously, even across long distances.**



1959 — First Indian Television Broadcast

India began experimental television broadcasting in Delhi on 15 September 1959. Television added moving pictures to sound, allowing viewers to receive information through both audio and visual content. Initially, broadcasts were limited, but television later became an important medium for education, entertainment and news.

Why it matters: Information was no longer just heard; people could also see events, demonstrations and reports.

Phase 2)
Is the information reliable(who guarantees it(source) also is the source reliable)

1989–1990 — Birth of the World Wide Web

British computer scientist Tim Berners-Lee developed the World Wide Web at CERN. By the end of 1990, he had created the first web browser, web server and website. The Web allowed information to be connected through hyperlinks, making it easier for people to access and share documents across computers.

Why it matters: **Websites became a new way for organisations and individuals to publish information. However, the Web itself does not guarantee that everything published is true.**

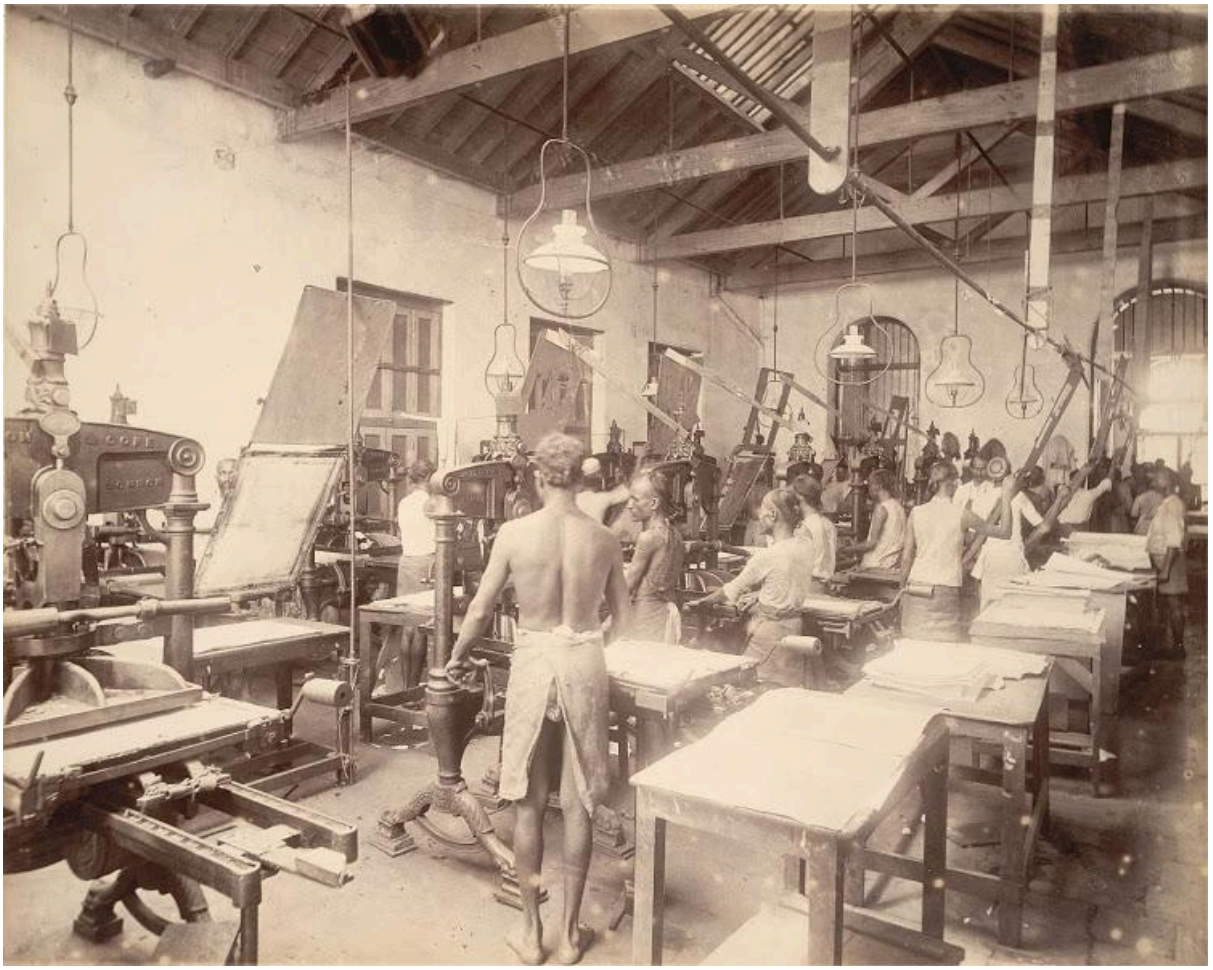
Who guarantees that online information is reliable?

Unlike a traditional newspaper with an identifiable publisher and editorial team, a website or social media post may be published by almost anyone. A browser only helps us access information; it does not verify the truth of that information.

To judge reliability, check:

- **Source: Who created or published the information?**
- **Evidence: Are facts supported by documents, data or credible experts?**
- **Date: Is the information current and in the correct context?**
- **Cross-check: Do independent, trustworthy sources report the same thing?**
- **Accountability: Does the publisher correct mistakes and explain its methods?**

Phase 3)
Who controls and influences the information



1780 — Hicky's Bengal Gazette

Published in Calcutta by James Augustus Hicky, this newspaper is widely recognised as India's first printed English-language newspaper. It published criticism of colonial officials and the East India Company. Its reporting brought it into conflict with the colonial authorities, who used legal action and restrictions against the newspaper, eventually leading to its closure in 1782.

Why it matters: **It demonstrates how those in power can attempt to influence, restrict or control the flow of information and criticism.**

1930s onwards — All India Radio

Broadcasting in India came under government management in the early 1930s, and the Indian State Broadcasting Service was renamed All India Radio in June 1936. It became a major source of news, public announcements, educational programmes and entertainment. Since broadcasting involved centralised stations and transmitters, institutions had significant influence over which programmes and messages reached listeners.

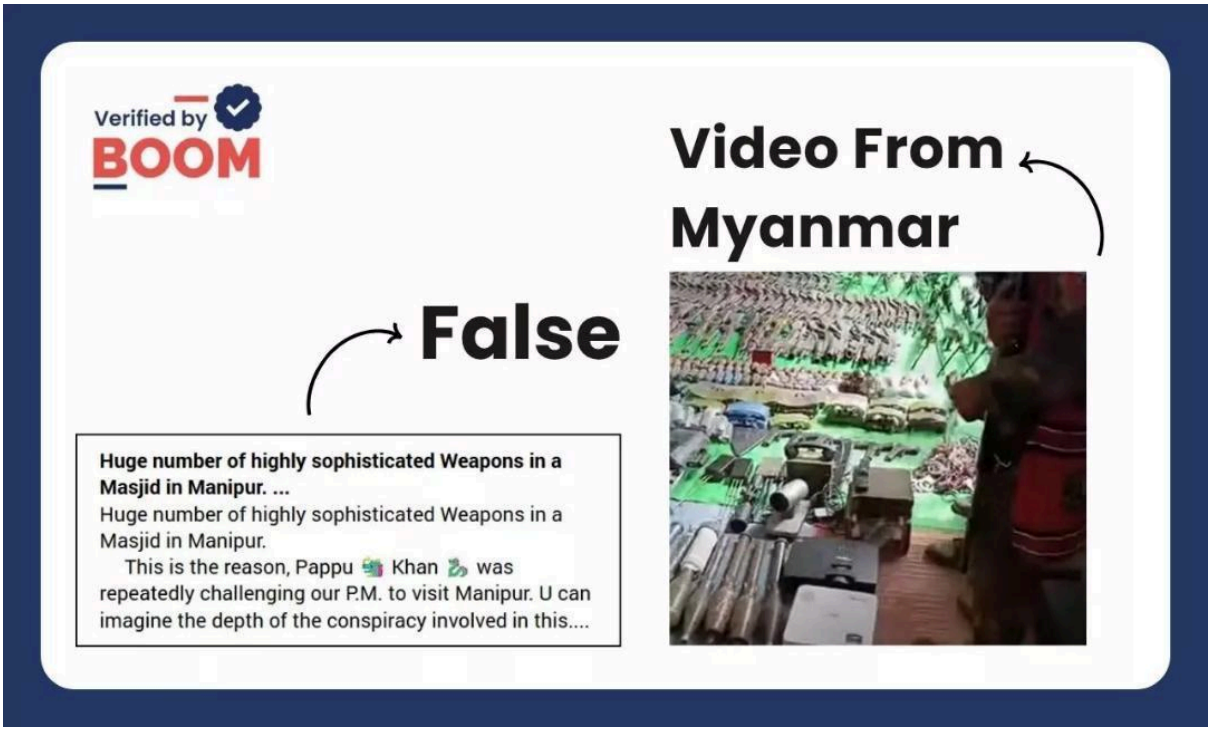
Why it matters: **It shows how broadcasting organisations and governments can shape the information received by large audiences.**

Phase 4)
Who opposes the fake influences

2019 — PIB Fact Check

The Press Information Bureau established its Fact Check Unit in November 2019. Its purpose is to investigate suspicious and misleading claims relating to the Government of India, its ministries, departments and public-sector organisations. People can report questionable claims, and the unit publishes findings to clarify whether government-related information is authentic or false.

Why it matters: **It provides an official channel for checking claims about government announcements and policies. Its scope is limited to matters concerning the Union Government.**



2016 — BOOM

BOOM developed into a digital journalism and fact-checking initiative in its current form in November 2016. It investigates misleading claims, viral photographs, manipulated videos and false information circulating on social media. It also allows people to submit suspicious messages and posts for verification through its WhatsApp helpline.

Why it matters: **It demonstrates how independent digital organisations can investigate viral claims and provide evidence-based corrections.**

1)Radio

ALL India Radio(photos)

All India Radio (AIR)—officially known as **Akashvani** (Sanskrit for *"voice from the sky"*)—is India's national public radio broadcaster and a division of **Prasar Bharati**. Guided by the motto *"Bahujana Hitaya : Bahujana Sukhaya"* ("For the happiness and welfare of the many"), it is one of the largest radio networks in the world in terms of languages broadcast and population reach.

BROADCASTING HOUSE
BROADCASTING HOUSE

Akashvani @ 90

EMINENT PERSONALITIES WHO WERE PART OF AKASHVANI

LIONEL FIELDEN

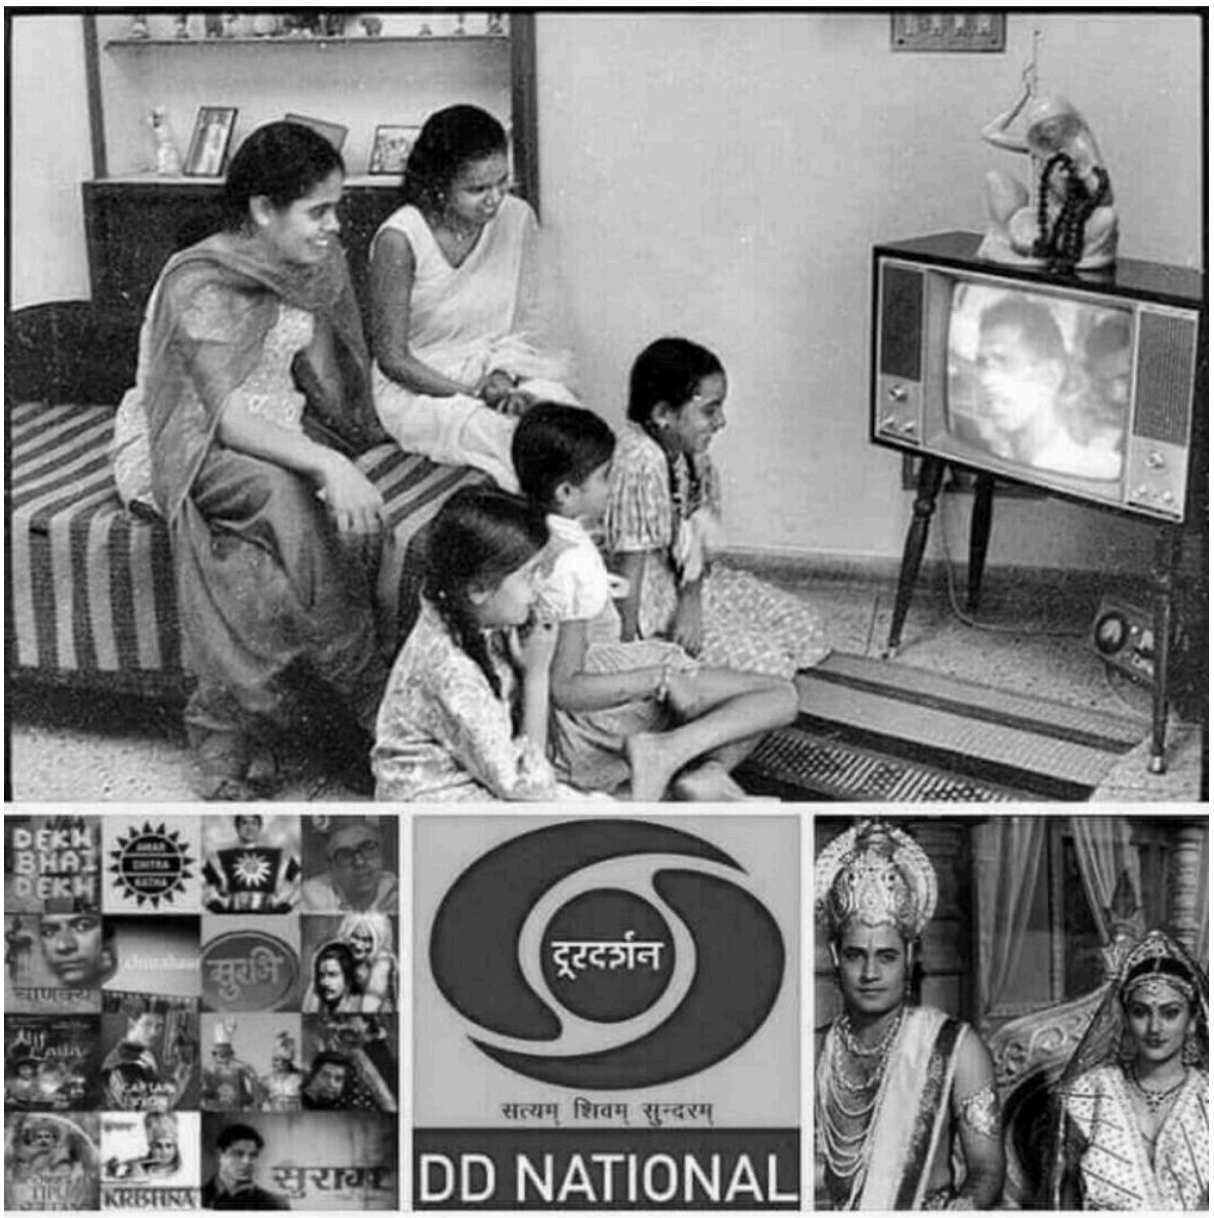
Lionel Fielden became the first *Controller of Broadcasting* in British India in *1935* after being transferred from the BBC. He helped establish the broadcasting system and coined the name *All India Radio (AIR)* in 1936.

As *Director-General of AIR (1935–1943)*, he believed radio should reflect *Indian aspirations rather than British views*. He promoted Indian music, drama, and public affairs, especially in Hindustani.

Even after leaving India, he stayed connected and trained broadcasters like *Z. A. Bukhari*.

Who controls the All India radio

2)TV(Monitor)



People moved from radio to television in the 1940s and 1950s primarily because **sight combined with sound offered a far more immersive and passive experience** than audio alone. Instead of relying on imagination to picture news, sports, and dramas, viewers could watch live events, facial expressions, and visual storytelling unfold directly in their living rooms—making television a much more compelling centerpiece for family entertainment and advertising.

3)Satellite

Satellites entered the communication picture to solve a basic physical limitation of Earth: **radio and television waves travel in straight lines**, meaning the curve of the Earth blocks signals beyond the horizon, and laying cables across oceans or rugged terrain is slow and expensive. By acting as **microwave relay towers in space**, satellites receive a signal from one point on Earth, amplify it, change its frequency to avoid interference, and beam it back down to a vast area below.

ZONE-4

1. Four activity heading sheets.

2. VISITORS BOOK
3. STICKY NOTES
4. ACTIVITY CARDS & CARD HOLDING BOX
5. TAPE
6. FEW PENS/MARKERS
7.

Transition between activities

After Activity 1:

"Just as people used symbols and inscriptions to preserve messages, later technologies developed new ways to transmit information. Let's see how the telegraph made communication faster."

After Activity 2:

"Now we have seen how messages travelled through coded electrical signals. But today, we receive information from many different sources. How do we know what to believe?"

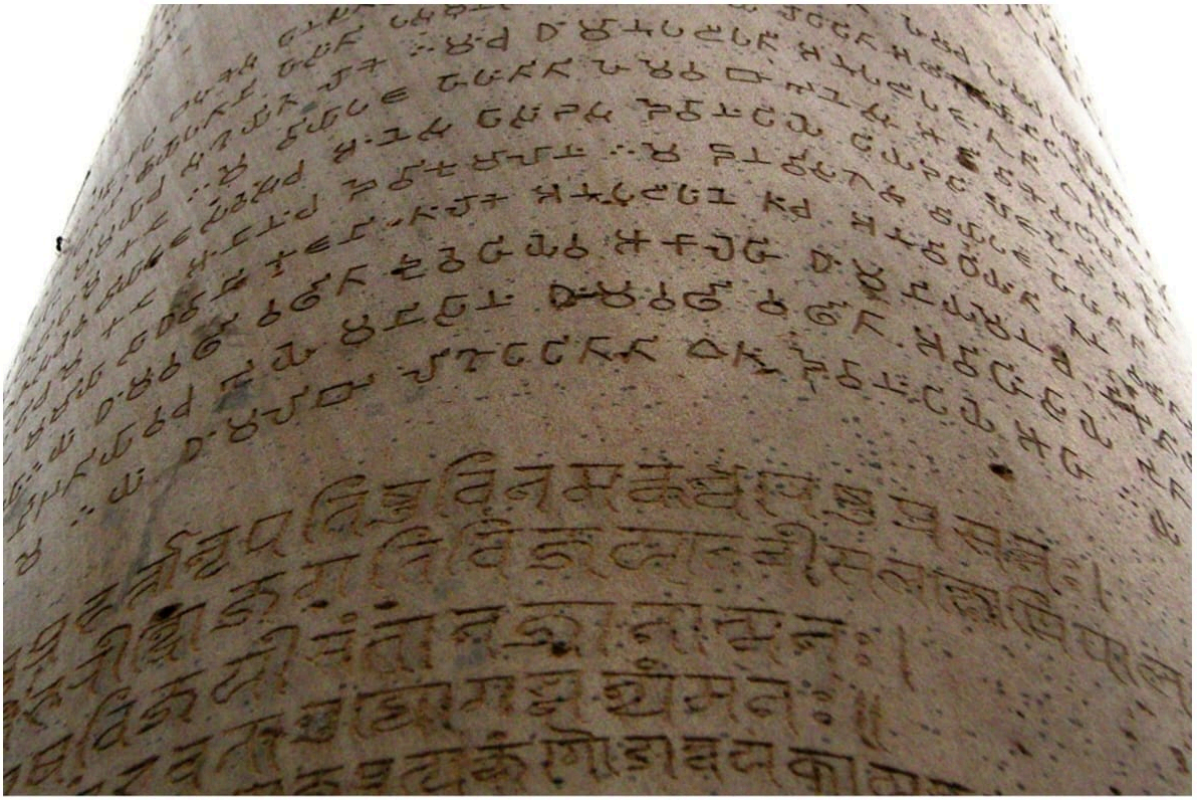
After Activity 3:

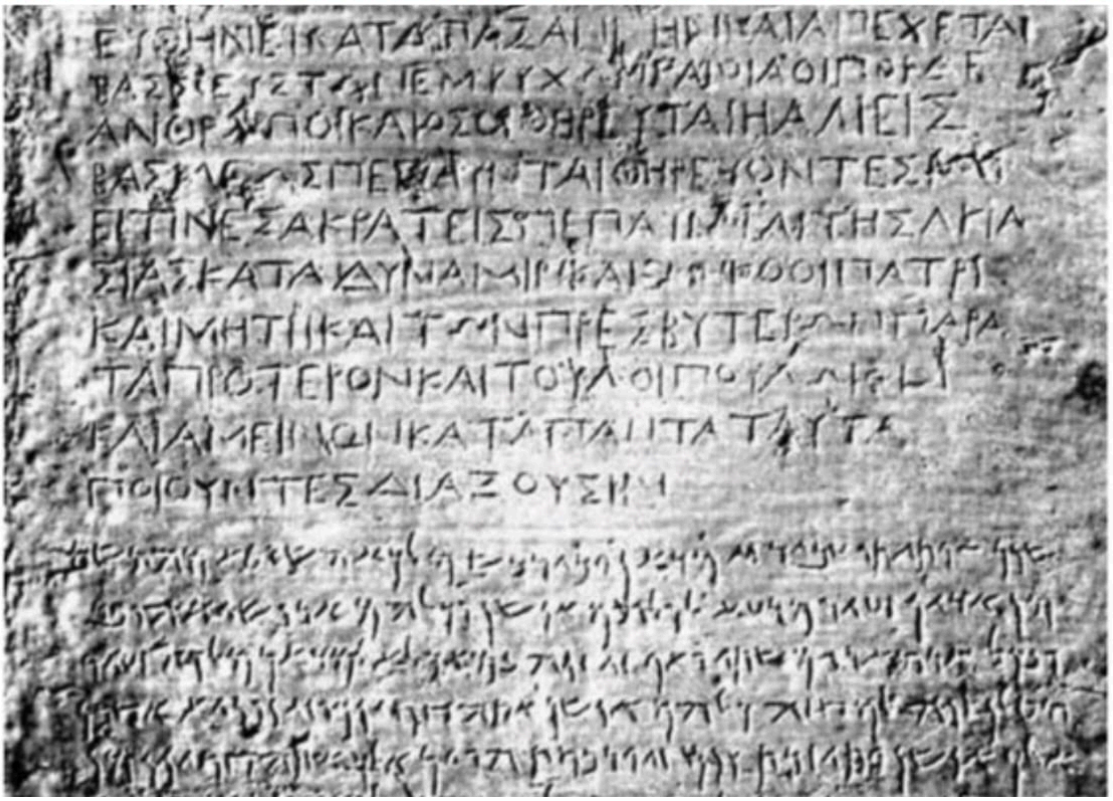
"We have explored how people communicate today. Now let's imagine what communication might look like in the future."

Closing:

"Thank you for participating in our activities. Our exhibition shows that communication has changed enormously, but some questions remain the same: who sends information, who receives it, and can we trust it? Please leave your thoughts in our visitors' book."

ZONE 1

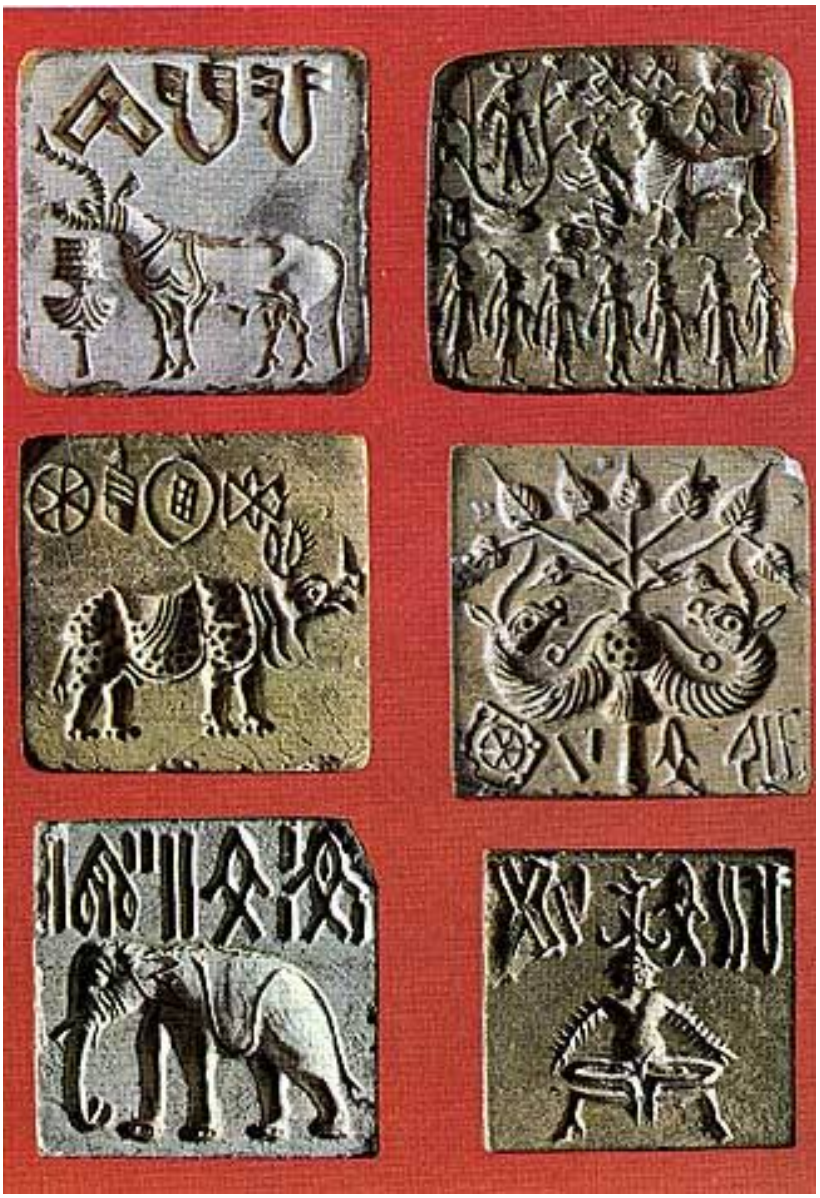




Ashokan Edict

Date: Around 3rd century BCE

Emperor Ashoka had messages carved on rocks and stone pillars across his empire. These inscriptions communicated his teachings, moral principles and royal instructions. Carving messages in stone helped preserve them for generations, although only people who could read or hear the inscriptions could understand them.



Indus Seal

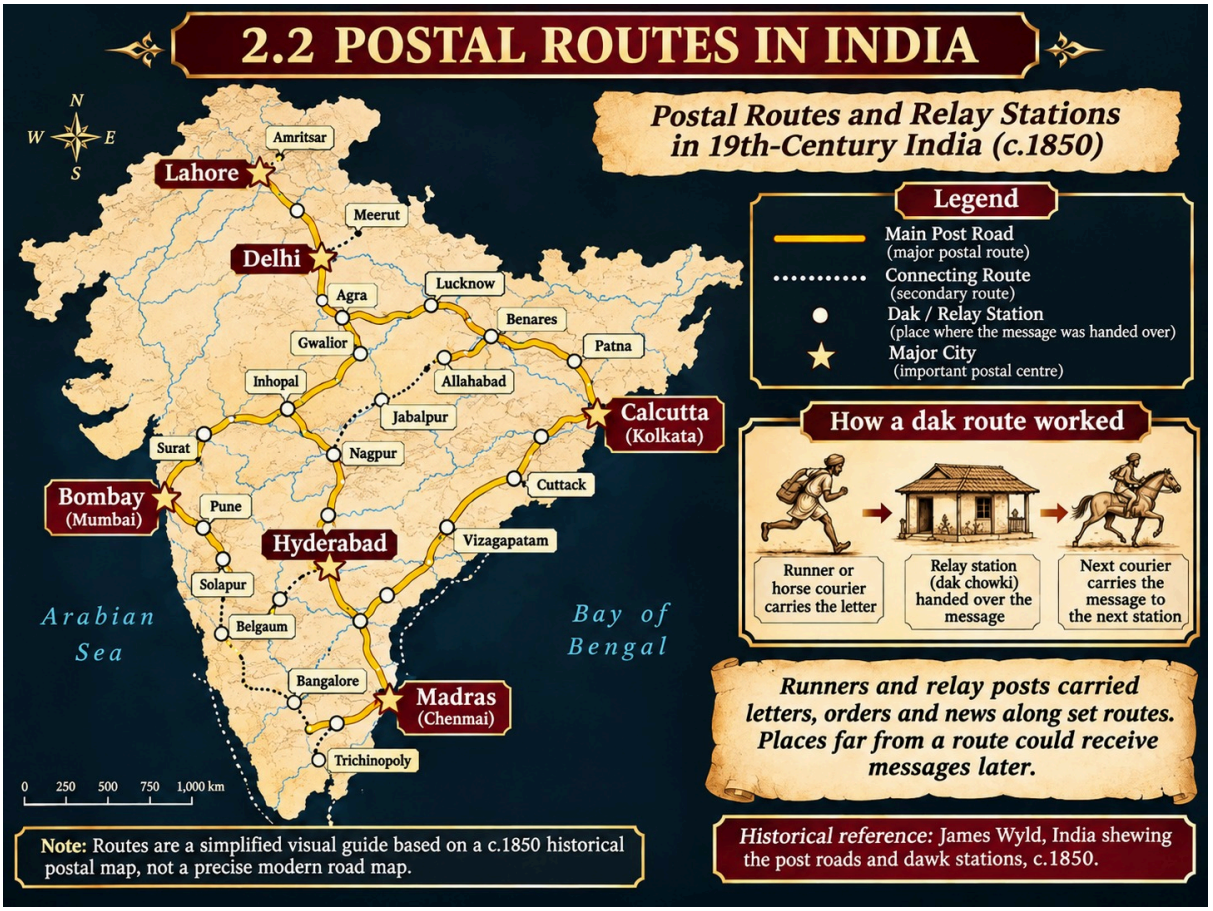
Date: Around 2600–1900 BCE

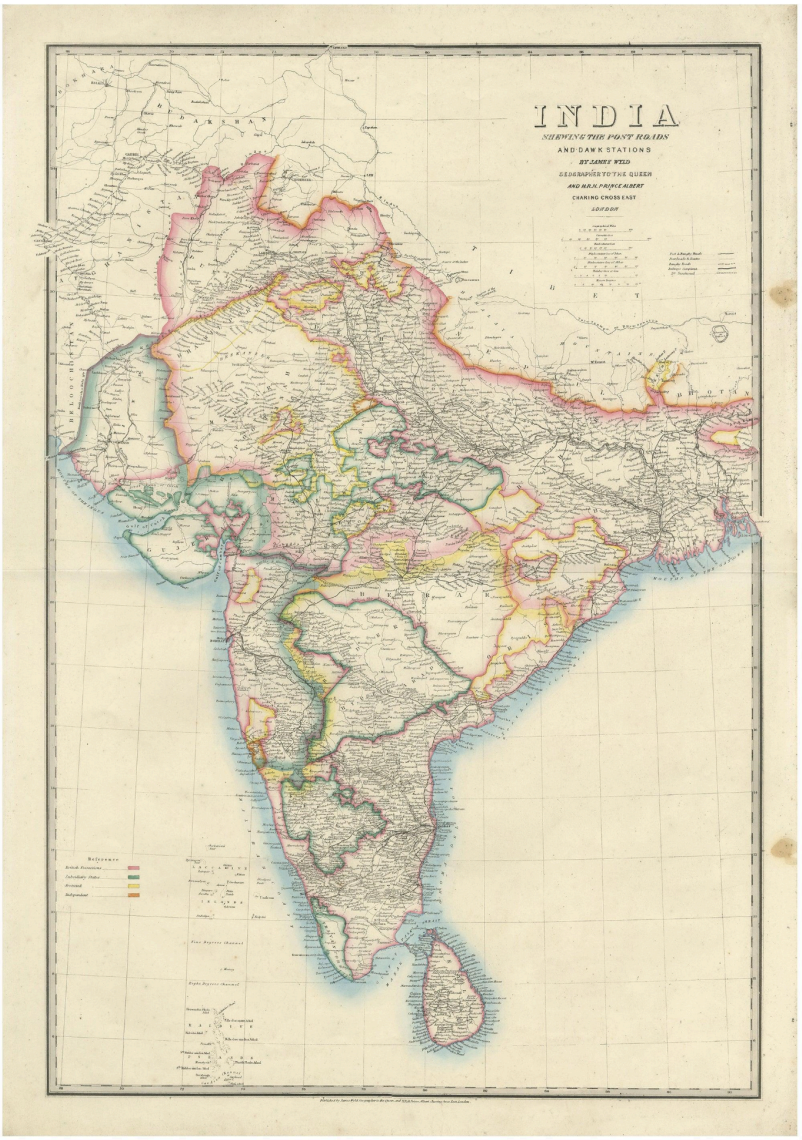
The Indus Valley civilisation used small seals containing animal figures and symbols. These seals provide evidence of an early system of visual communication. However, the Indus script has not yet been deciphered, so the exact meaning of its symbols remains unknown.

Oral Tradition: A Living Tradition Across Many Centuries

Before writing became widespread, people preserved and shared knowledge through speech, stories, songs and memory. Elders passed down cultural values, traditions,

historical events and religious stories to younger generations. Folk performances like **Burra Katha in Andhra Pradesh and Telangana** played an important role in this process, where storytellers used narration, songs, music and expressive dialogue to communicate stories to village audiences. In this way, oral traditions kept knowledge and cultural heritage alive across generations, even without written records.





Dak Routes and Postal Networks in India

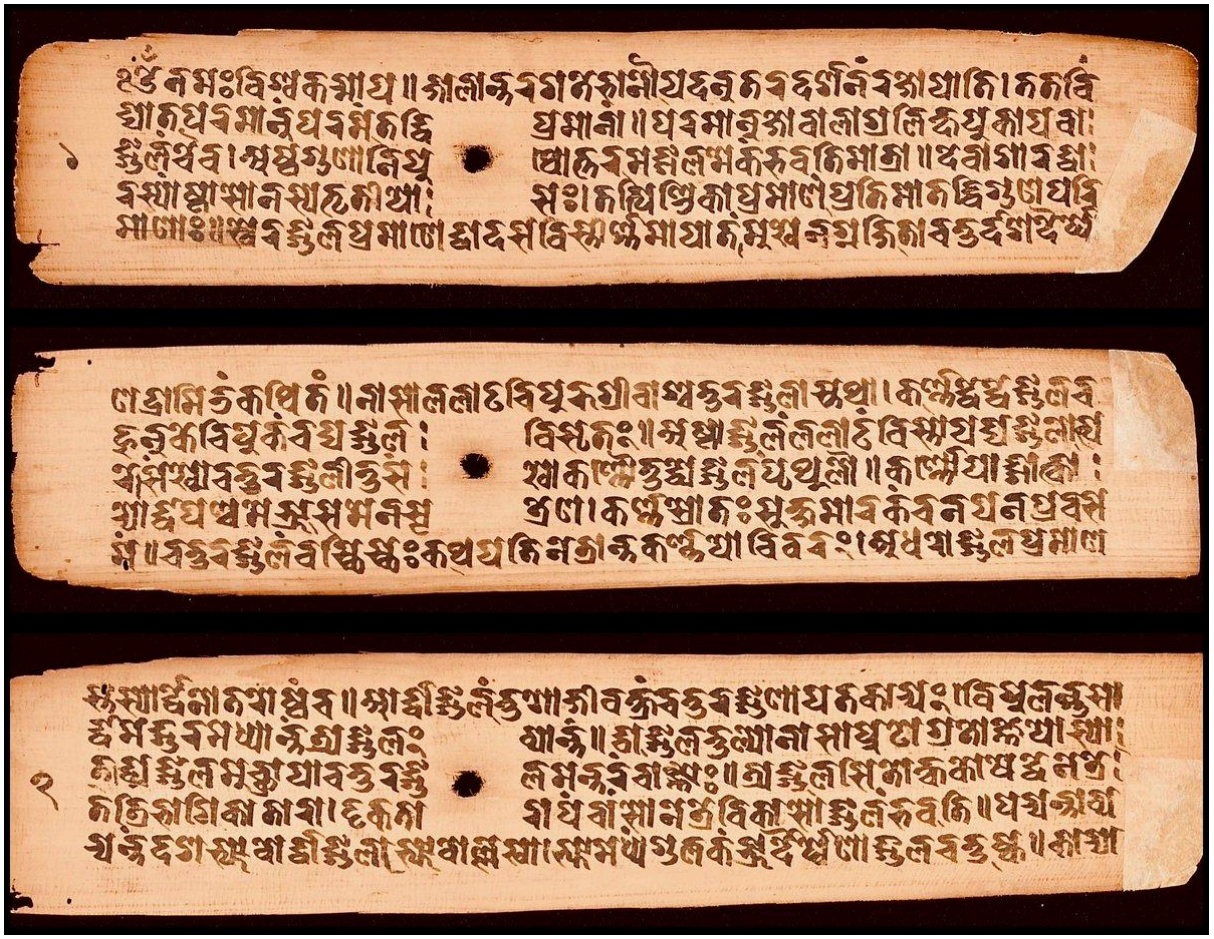
During the 19th century, dak routes connected important towns and cities through an organised network of postal roads and relay stations. Runners and horse couriers carried letters, official orders and news from one station to another. These routes helped information travel across long distances, although remote areas often received messages much later.

Indian Postage Stamps: Messages Through the Postal System

Postage stamps represent the development of India's postal communication system. They were used as proof that the sender had paid for a letter to be delivered. Indian commemorative stamps also feature important personalities, historical events and national achievements. They provide a glimpse into India's history while showing how letters connected people across distant places.

Envelope and etc items we should order and a pic for that

ZONE-2



HICKY's
BENGAL GAZETTE;
OR THE ORIGINAL
Calcutta General Advertiser.

A Weekly Political and Commercial Paper, Open to all Parties, but influenced by None,

From Saturday December 9th to Saturday December, 16th 1780. No. [XLVII]

Extract from a Collateral Case of Phaeton Lounger Esq; Writer in the Honble Company's Service, published for the benefit of the afflicted.

PHAETON LOUNGER esq; an Assistant in the Secretary's Office, from taking too large a Dose of a Medicine newly introduced into Bengal, call'd the *Monitor*, prescribed by Doctor M——k, and R—d, was immediately seized with an involuntary Stupor, and universal *Lethargic Numbness* of the *Senses*, Pains in the *upper regions* of the *Mid. Diaphragis* in the *Pericranium*, and an intolerable weight on the Eyelids—A pinch of Sternutatory Powder, [illegible] could relieve me.—but it had only the *desired effect*. The further disagreeable Symptoms brought on by taking this Dose of Doct. R——d's Monitor were, an excruciating Cholic——Gripings in the Abdomen, and a most horrible Tenesmus. Being much alarmed, I sent for Doctor *Kill-cranny*, one of the most Eminent of the Calcutta Faculty, who formerly came out a Midshipman in the Rumbold Indiaman, Sir Hugh Cannery Commander. Doctor Killcranny pronounced my Case to be *the Bile* with a gentle Schirrus in my liver.——He accordingly fomented me to be rubb'd all over with mercury, as if I was to be *Tar'd* and *Feathered*, making me swallow at the same time three *Hugh balls*, which he said would lubricate the passages and carry off the Bile.—After undergoing a variety of Bleedings, Blisterings Scarifications.——Rowellings, and tepid Emetiques I found myself rather worse than *better*, and sorely believe that Doctor Kill-Cranny (tho' a very great physician) mistook my Case [illegible] Fury.

In this my deplorable State, a Brother Writer *Rigdum Funnier Esq*; of Lyons now prevailed on me to try only a single *Dose* of a pleasant perscription, prepar'd by *Doctor HICKY*, call'd *Pills to purge Melancholy*, or the *Enlivening Elixer of* MIRTH, published and sold by the said *Doctor Hicky* at the same price as James Fever powders, in papers at a Single half Crown each.——The very first Dose gave me instant relief, brought away the wind and occasioned an Alvine flux. Explosion.——My Spirits became light and jovial, The gloom occasioned by the Dose I had taken of the monitor, was dispers'd, and by continuing Doctor HICKY's Extraordinary Medicine only 7 Weeks I find myself quite another Man.——The *Lachrymal Stopper* has left me, and the *Abdominal* gripings are totally removed.—The only inconvenience I feel is a little remains of the *Tenesmus*, which I understand is now the general complaint and unavoidable symptoms attendant on all those who are prudent, and happen to swallow even so small a quantity of that *Narcotic, office* composition Doctor R—d's *Monitor*.

In gratitude to Doctor HICKY (by whom I am so happily relieved) and for the benefit of the *afflicted*, I make Publick this Case and event, offering all those who may have Occasion hereafter, to consult that very able and *Salutary Physician Doctor HICKY*, that they will find his *Perscription*, (if faithfully adher'd to, and persevered in) a Sovereign cure for all Leuveth of *Spirits, Hypochondriacal affections, Nervous Relaxation, Blue devils*, Disorders arising from *obstructions*, in the *Viscera*, or too great a redundancy of *Spleen* or *Gall*.

N. B. The truth of this cafe has been Officially Sworn by the aforesaid *Phaeton Lounger* Esq; before Mr. Justice Perring.

AN IMITATION.

SO with a pair was never seen,
So justly formed to match by nature;
M——k, excelling fo in mein
Peter in every graceful feature:

O how happy fate and Lover
Where kindred grandeur each discover;
For M——k fate the modes form'd
Minerva trained the fapient *Peter*.

So come their works, all children thence
Will early learn the talk of duty;
At ftrap the Boys will draw in ftrife,
Sleeping the Girls, intereife in beauty.

O how charming to inherit,
Dullneft, and for it pafs for fpirit;
Thus while you live, may fortune give,
Each bleffing due to real merit.

IMPROMPTU.

For The Original, Bengal Gazette.

By Letters from Madras, 15 Nov. &c.

SIR EYRE COOTE's arrival made us very happy, the troops are a feafonable fupply, tho' not a force equal to our exigencies.

The fubjugation of Mr. Whitehill by the *Supreme Council*, tho' undoubtedly illegal met with no oppofition. Our Critical fituation demands unanimity of Councils and meafures, and Mr. W—— *private* and *Public Character* is fo defpicable as to render him undeferving a momentz conffderation. The times require a Cato at the Head of our prefidency, they require not only an *Integ*, but a *fpotlefs Man*.

SIR EYRE COOTE, hoped to have found ARCOT, but unfortunately arrived two days after its Capture.

Hyders triumph is the Fruit of our Mahratta War, we are in great diftreft, and I think muft await the arrival of the Bengal Troops, ere we can take the field.

SIR EYRE COOTE is extremely perplex'd by the fituation of our affairs, it is humiliating to his active fpirit, to be forced to act on the defenfive, againft a Country power whom we ufed to defpife, and at whofe prowefs you ftill continue to think figh ly.

Without Hyder is alcomed by the attack on his own Country, orders having been fent to Gen'l Goddard to carry the war into *Myfore*, I am afraid he muft continue Omnipotent in the Carnatic.

QUERY. Would not an Englifh Admiral be more in his element fmoaking a pipe of Virginia on the QUARTER DECK, than at a Kirby DINNER furrounded by *Pimps Caffrats* a *Catamitus* and *dancing Girls*.

Yours.

TOM Bowline.

Mr. HICKY fuppofe the following is the Impromptu rejected by the Mifs. R——d and M——k. But judging of it by the admired works of Butler, and Swift, and the laft domeftic mentions Mr. thanks his correfpondent inftead of affronting him, by declaring the Impromptu to be inducet.

An Extempore on feeing Meff. R——d's, and M——k's Advertifement.

" R——D take my advice and whatever betides
Pray let your News-paper alone,
Mr. Hicky's fuffices for all our R——s
So keep your Gazette for your own.

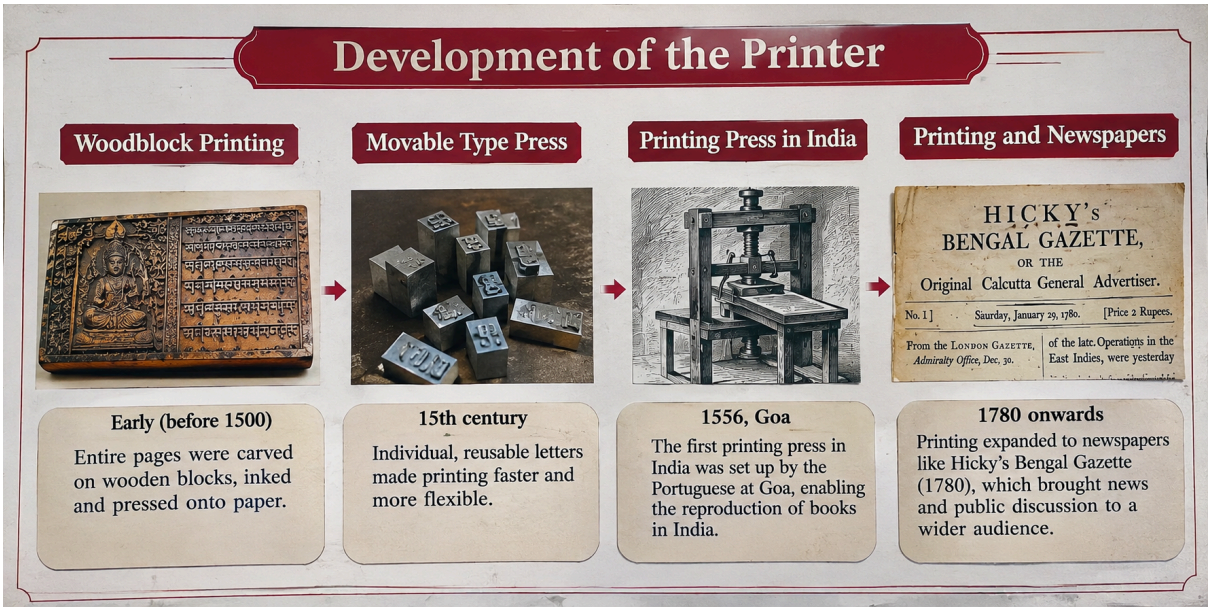
Mr. HICKY,

THE fuperiority of your paper over that of your rivals, is manifeft and acknowledged by all who have read your late Gazettes.——Let any impartial perfon cast a glance at G——t, or fcrabling to obtain a *contraft*, only compare the Types of the two Papers, and give a fair verdict. The *Original Bengal Gazette* from the fmallneft of the Letter, contains confiderably *more Matter* than the *India Gazette*; And as to the *fubjeft* and quality of your publication, having greatly a preference, let any perfon of Literary Tafte, peruse the four numbers of the MONITOR, (that moft ftupid and egregious performance) and decide.

Does the writer of that Paper mean to obtrude his Candid and Vulgar Opinions as the only ftanding ftandard of Tafte and propriety.——there can not be a greater Infult on the underftandings and fpirit of the Settlement.——Like the Goth and Vandals who waged Deftructive War in Greece, with every Work of Tafte, Learning or elegance. This Barbarian, (the Author of the Monitor) Quarrels with *millions* and condemns the *fagacious* exertions *of the Country*, fcarcely in this trying *Sultry* Climate, *remote from Europe* and its *moft refin'd* Enjoyments, DANIELS could not have ftretched a ftngle creature of *Genuity* even from OLD PLAUTUS, nay'd he be brought from the *Shades*, to vifit the Calcutta *Hermonic*.—But fuch is the unhappy ftate of this Authors Mind, from fpleen and other mortifications that he wifhes to infult the cheerful part of

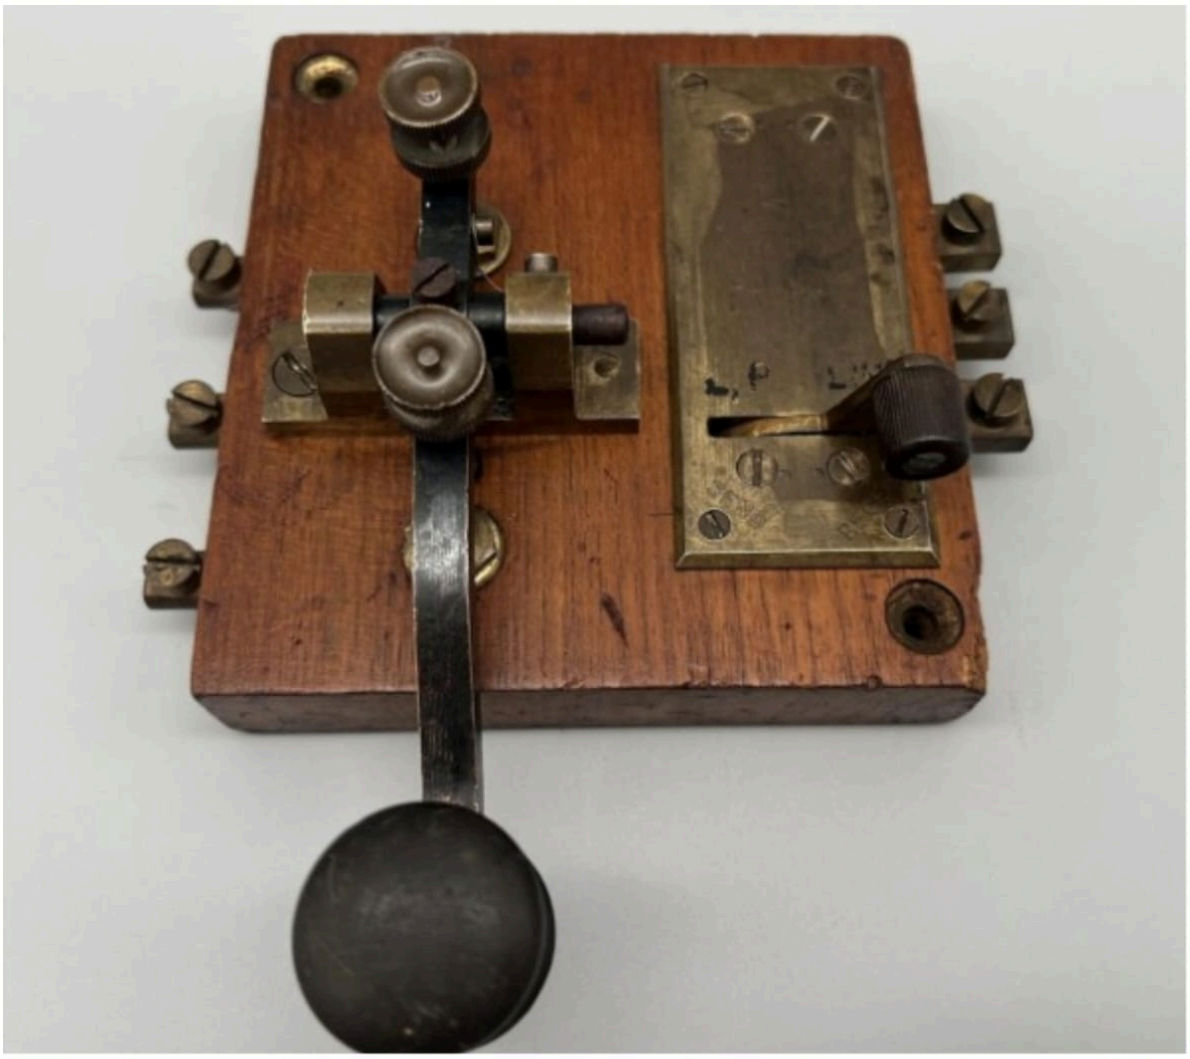
Handwritten and Printed Text

Before printing, manuscripts were copied by hand onto materials such as palm leaves and birch bark. Each copy required time and skill. The printing press, introduced in Goa in 1556, made it possible to reproduce the same text in multiple copies. Hicky's Bengal Gazette (1780), India's first newspaper, showed how printed information could reach a wider reading audience.

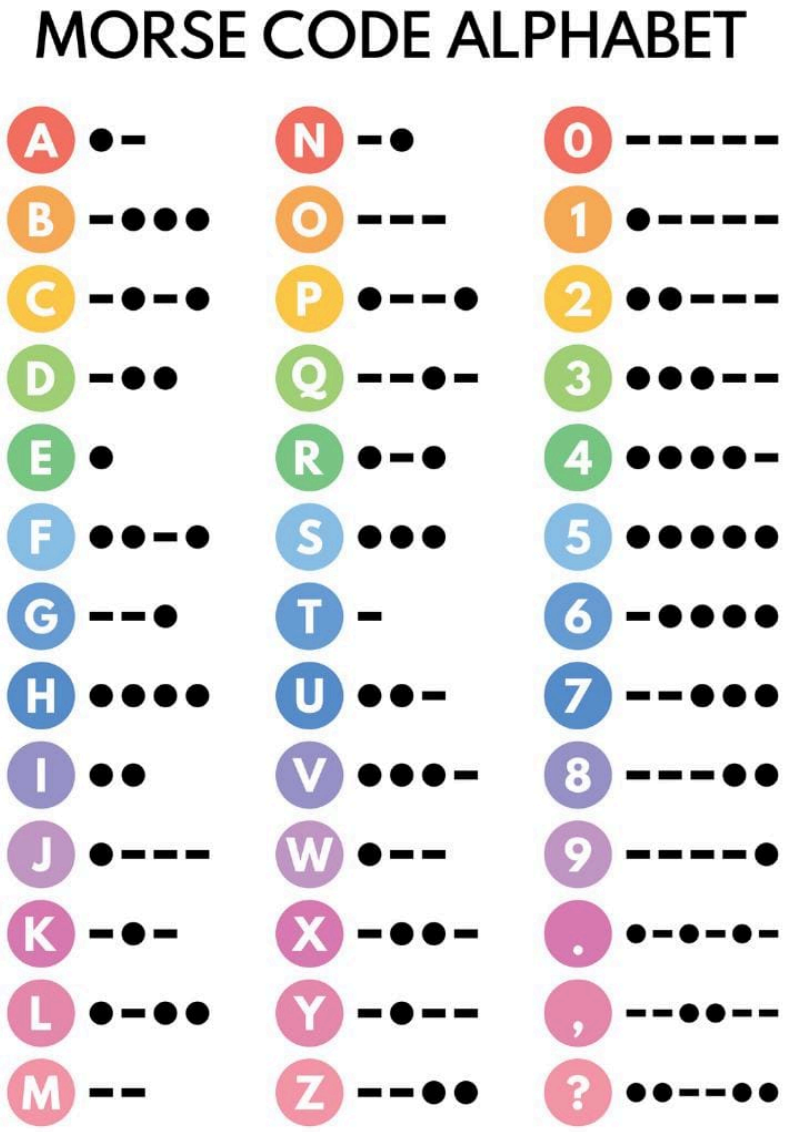


Development of the Printing Press

Printing technology evolved from wooden blocks carved with text to movable type and mechanical printing presses. Movable type made it easier to reproduce written material. In India, the first printing press was established in Goa in 1556 by the Portuguese. Printing later expanded through books, pamphlets and newspapers. Hicky's Bengal Gazette, published in 1780, marked an important milestone in Indian journalism. Printing made information easier to reproduce and distribute to a wider audience.



Bombay



The Telegraph: Messages Through Electrical Signals

The electric telegraph transformed long-distance communication by sending coded electrical signals through wires. An experimental telegraph line connected Calcutta and Diamond Harbour in 1850, followed by regular telegraph service in 1851. Using Morse code, operators transmitted messages much faster than traditional messengers.

The Telephone: From Distant Words to Instant Conversation

Telephone exchanges began operating in Calcutta, Bombay and Madras on 28 January 1882. Unlike the telegraph, which transmitted coded messages, the telephone allowed people to communicate using their voices. It made real-time, two-way communication possible, although access initially remained limited to connected users and institutions.
